

Bullion Monarch Mining Inc. Launches Bauxite Exploration in Brazil

08.06.2011 | [Marketwired](#)

ST. GEORGE, UT -- ([Marketwire](#) - Jun 8, 2011) - [Bullion Monarch Mining Inc.](#) (OTCQB: BULM) (OTCBB: BULM) is pleased to announce commencement of the recommended exploration plan outlined in the 43-101 report filed on the recently acquired Niquelândia bauxite property located in Goiás, Brazil. The Niquelândia Project is located as the northeastern extension of a prominent trend that contains the Barro Alto bauxite deposit which is currently under development by Campanhia Brasileira de Alumínio, and the Barro Alto nickel laterite deposits under advanced-stage development by Anglo American. A total exploration budget of \$1.5 million has been allocated. Phase I work is estimated to cost \$575,000 and phase II is estimated to cost \$925,000. The plan consists of:

Phase I

- Detailed mapping
- Geophysical analysis
- Metallurgical sampling, testing and characterization
- Wide space drilling in areas of known mineralization

Phase II

- Definition drilling on a regularized pattern in prioritized locations
- Metallurgical analysis
- Resource calculation

Reserve modeling will be performed based upon the results of phase I and II. This will involve the assessment of mineability and processability of the mineralization, and economic feasibility of the Niquelândia Project. The Niquelândia Project is substantial in scope and a significant exploration effort is required to fairly and adequately characterize the area.

Bullion Monarch President James A. Morris states, "The Niquelândia Property is an incredible opportunity for our company to gain a position in the very strong aluminum market. We are committed to maximizing shareholder upside in properties by avoiding dilution and debt during early exploration. Bullion Monarch remains a unique company in the sector by self-financing exploration projects through royalty revenues from previous successes."

Bullion Monarch geologists believe the deposit to be located at surface or near surface covering a large area, possibly up to 25 km in length and up to 5 km in width. Previous exploration on the property, consisting of surface sampling intended to prove the existence of bauxite mineralization, have returned Al₂O₃ content up to 61.8% with numerous values greater than 60%. Geologists have concluded that the grade of the aluminum oxide, at the project, is uniformly above the cutoff grade for operating bauxite mines. Highlights from a surface sampling report analyzed by ALS Chemex are as follows:

NIQUELANDIA BAUXITE TO ALUMINA PRODUCTION GRADE ANALYSIS

(samples selected from Al₂O₃ values greater than 50%)

| Sample ID | Al ₂ O ₃ (%) | SiO ₂ (%) | Fe ₂ O ₃ (%) | TiO ₂ (%) | LOI (%) | Module |
|-----------|------------------------------------|----------------------|------------------------------------|----------------------|---------|--------|
| 17 | 52.8 | 13.35 | 5.33 | 0.10 | 25.5 | 4.0 |
| 22 | 61.5 | 3.25 | 2.01 | 0.13 | 31.2 | 18.9 |
| 23 | 61.8 | 4.06 | 2.96 | 0.22 | 31.0 | 15.2 |
| 24 | 60.8 | 4.41 | 3.54 | 0.17 | 30.5 | 13.8 |
| 25 | 60.9 | 4.82 | 2.38 | 0.15 | 30.7 | 12.6 |

LOI greater than 20% is classified as Bauxite. LOI less than 20% is considered Laterite.

Bauxite is an aluminum ore that is the main source of alumina and aluminum. Approximately four tons of bauxite produces two tons of alumina, which in turn is smelted to produce one ton of aluminum. Most metallurgical-grade bauxite and alumina are purchased under long-term contracts and contract terms are normally not made public. Price for bauxite ore varies according to percent alumina content in the ore. USGS reports that the average value of U.S. imports of crude and dried bauxite (~30-50% alumina) was \$37.10/metric ton in 2009, up from \$35.92 in 2008. The price for refractory-grade bauxite (88% alumina) in 2009 ranged from \$390 - \$510/metric ton.

From 2000 to 2009, the demand for aluminum increased more than 35%, in 2010; it increased by 12%, compared to 2009. While bauxite is valued by its percent alumina content, alumina prices generally follow the trend of aluminum prices. Since the global economic downturn in late 2008 to early 2009 aluminum has followed a positive trend and is currently valued at approximately \$2,500/metric ton.

About Bullion Monarch Mining

Bullion Monarch Mining Inc. is a publicly traded (OTCQB: BULM) (OTCBB: BULM) (FRANKFURT: BMJ) gold-focused exploration royalty company with additional interests in bauxite and oil-shale technology. The Company is engaged in a continual review of mining opportunities to create growth for shareholders. The majority of current royalty revenues are derived from a high-quality claim block located in Northeastern Nevada's Carlin Trend. Bullion Monarch's portfolio provides for direct leverage to commodity prices as well as the exploration potential of world-class ore deposits. Visit the Company website at www.bullionmm.com for more information.
