Doubleview Capital Corp. Deploys Exploration Team to Hat Property

23.10.2014 | ACCESS Newswire

Vancouver, BC / TNW-ACCESSWIRE / October 23 2014 / Doubleview Capital Corp. ("Doubleview") (TSX-V: DBV) is pleased to announce that it has deployed an exploration team to the Hat Property to conduct reconnaissance work as well as prepare for the upcoming drill program.

Management and advisors have further refined the geological model for the Hat Property to incorporate recent drill results and data compilations. Since acquiring the Property in 2011, Doubleview has conducted geochemical and geophysical surveys and more than 6000 metres of drilling in 22 holes. Most drilling has been directed to the Lisle Zone ("Anomaly B") where copper-gold mineralization is hosted by strongly altered volcaniclastic and gabbroic (intrusive) rocks. Several areas with similar technical characteristics remain to be investigated by drilling.

The 2014 drilling program indicates that metal values appear to increase with depth but the Zone has not been delimited in any direction. Assay data have been reported in news releases (May 14, October 6, 2014) and core and property photographs can be viewed on the Company's website www.doubleview.ca. The following drill holes are particularly significant:

- H-11: 451 metres (1480 feet) with 0.33% CuEq, and

- H-12: 246 metres (807 feet) with 0.35% CuEq including 94 metres (308 feet) with 0.60% CuEq, and

- H-22: 404 metres (1325.5 feet) with 0.4% CuEq including 118 metres (388.5 feet) with 0.80% CuEq.

A drill plan showing the location of drill holes is located on the company's website at www.doubleview.ca , and its new presentation.

CuEq% (copper equivalent%) are estimated using prices of $3.05/lb copper and $1196/troy ounce gold. True widths of mineralization are unknown and a mineral resource has not been defined. There can be no assurance that further exploration will result in delineation of a resource.

Doubleview's management is extremely encouraged by the progress in defining the Lisle Zone and planned drilling will further outline its dimensions and copper-gold values. The field crew will also re-examine cores from some of the previous drill holes to better define the mineralization model and to help guide future work.

Erik A. Ostensoe, P. Geo, a consulting geologist, is Doubleview's Qualified Person as defined by National Instrument 43-101 - Standards of Disclosure for Mineral Projects, with respect to the Hat Project and has reviewed, approved and verified the technical disclosure of this news release. Mr. Ostensoe is not independent of Doubleview as he is a shareholder and is a co-optionor of the Hat Project.

About Doubleview Capital Corp.

Doubleview Capital Corp. is a Canadian resource exploration and development company located in Vancouver, British Columbia that is publicly traded on the TSX-Venture Exchange with the symbol TSX-V:DBV.

Doubleview identifies, acquires and finances quality precious and base metal exploration and mining projects in North America and more specifically British Columbia, Canada. Doubleview's objective is to increase shareholder value through strategic and quality Gold, Copper and Silver project acquisitions, followed by application of advanced, state of the art, exploration methods.

On behalf of the Board of Directors,

Farshad Shirvani
President & Chief Executive Officer
