

TORONTO, March 30, 2015 /CNW/ - [Marathon Gold Corp.](#) ("Marathon" or the "Company") (TSX: MOZ) today announced positive results from the last drill holes of the winter 2015 drilling campaign at the new Marathon Gold Deposit, located 7 kilometers northeast along strike from the Leprechaun Gold Deposit and 5 kilometers southwest along strike from the Victory Gold Deposit, Valentine Gold Camp (Figure 1). This new deposit consists of dominantly shallow southwest dipping, multiple vertical stacked gold-bearing quartz-tourmaline-pyrite (QTP) tensional veining identical in appearance to the gold-bearing QTP veining found elsewhere throughout the Valentine Gold Camp. A resource update will be completed in the second quarter of 2015.

These latest drill holes into the Marathon Gold Deposit have succeeded in both expanding the dimensions of the Main mineralizing corridor and further defining a new South mineralized corridor (Figure 1). New drill intercepts in the Main mineralized corridor included 2.85 g/t Au over 12.4 meters true thickness (TT) in MA-15-038, 1.03 g/t Au over 25.8 meters (TT) in MA-15-043, and 1.64 g/t Au over 12.6 meters (TT) in MA-15-046. New near-surface high-grade gold intercepts in the South mineralized corridor included 9.28 g/t Au over 2.6 meters.

The Main Marathon corridor has a current strike length of over 350 meters, a true width ranging from 50 to 100 meters, and a vertical depth of more than 200 meters with a second near surface mineralized corridor developing closer to the Valentine Lake Thrust Fault (Figure 1). Both the Main and South mineralized corridors are open along strike and to depth.

Highlights (all drill intercepts reported at true thickness):

- Drilling along the Main mineralized corridor intersected 2.85 g/t Au over 12.4 meters with 6.51 g/t Au over 3.9 meters in MA-15-038, 1.03 g/t Au over 25.8 meters with 10.28 g/t Au over 0.6 meters and 5.59 g/t Au over 0.6 meters in MA-15-043, and 1.64 g/t Au over 12.6 meters (TT) in MA-15-046.
- Near surface drilling in the South mineralized corridor intersected 9.28 g/t Au over 2.6 meters and 1.23 g/t Au over 2.0 meters in MA-15-047 and 7.06 g/t Au over 2.1 meters in MA-15-037.
- All drill holes (MA-14-001 to MA-15-047) have intersected multiple stacked, gold-bearing quartz-tourmaline-pyrite veining and confirm a Main mineralized corridor with a current strike length in excess of 350 meters, a true width that ranges from 50 to 100 meters and a vertical depth in excess of 200 meters (Figure 1).
- Micon International is currently completing new open pit resources for the Marathon and Sprite Deposits as well as updating the Victory deposit resource. The Valentine Gold Camp currently has a resource of 816,000 oz Au (M&I) grading 2.24 g/t and 149,000 oz Au (Inferred) grading 2.64 g/t, almost all of which is open pit resource in the Leprechaun Deposit.

"The success of our winter 2015 drilling campaign at the Marathon Deposit further supports the untapped potential of the Valentine Gold Camp. We have over 5 kilometers of gold showings to the northeast of the current Marathon deposit, 5 kilometers of bog-cover prospective ground immediately to the southwest and numerous potential parallel zones around the Marathon Deposit. All of these areas are yet to be drill tested and will be an integral part of the ongoing development of Valentine Gold Camp." said Phillip Walford, President and CEO of Marathon.

TABLE 1: Significant assay intervals from the Marathon Deposit drill holes MA-15-037 to MA-15-047.

About Marathon Gold Corporation

Marathon Gold is a Toronto based gold resource company with exploration focused on its 100% owned Valentine Gold Camp located in central Newfoundland. The Valentine Gold Camp currently hosts two near-surface, mainly pit-shell constrained, NI 43-101 compliant gold resources totaling 816,000 oz. gold at 2.24 g/t (Measured & Indicated) and 149,000 oz. gold at 2.64 g/t (Inferred), (August, 2013). These resources, open along strike and to depth, cover less than 5% of the total length of the highly perspective Valentine Lake Thrust Fault and associated splay faults which host the majority of the gold mineralization within the property. Newly discovered gold zones, including the Sprite Zone and Marathon Zone, have returned wide intervals of near-surface good gold grades and have yet to be incorporated into new gold resources for the Valentine Gold Camp.
