

VANCOUVER, BRITISH COLUMBIA--(Marketwired - Dec 16, 2015) - [Skyharbour Resources Ltd.](#) (TSX VENTURE:SYH) (OTCBB:SYHBF) (FRANKFURT:SC1N) (the "Company") announces that it has purchased the remaining 40% interest in its Mann Lake uranium project in Saskatchewan from [Aben Resources Ltd.](#) (TSX VENTURE:ABN). The 3,473 hectare property is strategically located on the east side of the Athabasca Basin approx. 25 km southwest of Cameco's McArthur River Mine and 15 km northeast and along strike of Cameco's Millennium uranium deposit. For the 40% interest in the property, Skyharbour has issued 1 million common shares to Aben as payment and now holds an undivided 100% interest in the project. Aben has retained a 2.5% net smelter royalty (NSR) in the Mann Lake property with Skyharbour having the right to purchase 1.5% of the NSR for \$1.5 million.

Mann Lake Uranium Project Map:

The Mann Lake property is also adjacent to the Mann Lake Joint Venture operated by Cameco (52.5%) with partners Denison Mines (30%) and AREVA (17.5%). Denison Mines acquired International Enxco and its 30% interest on the project after the 2014 winter drill program discovered high grade, basement-hosted uranium mineralization. The drill program intersected 2.31% eU<sub>3</sub>O<sub>8</sub> over 5.1 metres including 10.92% eU<sub>3</sub>O<sub>8</sub> over 0.4 metres (see International Enxco News Release dated March 10<sup>th</sup>, 2014).

Fall 2014 EM Survey at the Mann Lake Uranium Project:

[http://skyharbourltd.com/\\_resources/maps/Mann-Lake-EM-Details.20140707.jpg](http://skyharbourltd.com/_resources/maps/Mann-Lake-EM-Details.20140707.jpg)

The Mann Lake Uranium Project has seen over \$3.5 million of previous exploration expenditures including recent geophysics and two diamond drill programs totaling 5,400 metres carried out by Triex in 2006 and 2008. Skyharbour recently carried out a ground-based EM survey focused on a zone where a favourable, 2 km long aeromagnetic low coincides with possible basement conductor trends indicated by prior EM surveys. The survey was successful in confirming the presence of a broad, NE-SW trending corridor of conductive basement rocks which are probably graphitic metapelites. These features trend onto the adjacent ground held by Cameco. In 2006, a diamond drill program intersected a 4.5 metre wide zone of anomalous boron (up to 1,758 ppm) in the sandstone immediately above the unconformity in hole MN06-005. Boron enrichment is common at the McArthur River uranium mine, and along with illite and chlorite alteration, is a key pathfinder element for uranium deposits in the Basin. In the same drill hole, an altered basement gneissic rock with abundant clay, chlorite, hematite and calc-silicate minerals was intersected about 7.6 metres below the unconformity, and contained anomalous uranium up to 73.6 ppm over a 1.5 metre interval. Background uranium values are commonly between 1 and 5 ppm.

Conductor Traces at Mann Lake Uranium Project:

Jordan Trimble, President and CEO of Skyharbour, stated: "Skyharbour's management believes this is an accretive deal for the Company's shareholders as we further enhance our portfolio of Athabasca uranium projects with drill ready properties in the Basin's most prolific areas. The Mann Lake Uranium Project boasts highly prospective geology and geochemistry, and robust discovery potential as identified by the historic work consisting of over \$3.5 million in exploration expenditures, with additional work recommended on a number of untested drill targets. Of particular note is the property's strategic location southwest of the McArthur River Mine and adjacent to Cameco's Mann Lake Joint Venture with AREVA and Denison."

Qualified Person:

The technical information in this news release has been prepared in accordance with the Canadian regulatory requirements set out in National Instrument 43-101 and reviewed and approved by Richard Kusmirski, P.Geo., M.Sc., Skyharbour's Head Technical Advisor and a Director, as well as a qualified person.

About Skyharbour Resources Ltd.:

Skyharbour holds interest in an extensive portfolio of uranium and thorium exploration projects in Canada's Athabasca Basin and is well positioned to benefit from improving uranium market fundamentals with four drill-ready projects. The Company owns a 100% interest in the Falcon Point (formerly Way Lake) Uranium Project on the east side of the Basin which hosts an NI 43-101 inferred resource totaling 7.0 million pounds of U<sub>3</sub>O<sub>8</sub> at 0.03% and 5.3 million pounds of ThO<sub>2</sub> at 0.023%. Skyharbour also has a 50% interest in the large, geologically prospective Preston Uranium Project proximal to Fission Uranium's PLS Project and Triple R deposit as well as NexGen Energy's Arrow discovery. The Company's 100% owned Mann Lake Uranium project on the east side of the Basin is strategically located adjacent to the Mann Lake Joint Venture operated by Cameco with partners Denison Mines and AREVA where high-grade, basement-hosted uranium mineralization was recently discovered. Skyharbour's goal is to maximize shareholder value through new mineral discoveries, committed long-term partnerships, and the advancement of exploration projects in geopolitically favourable jurisdictions.
