

CARDSTON, ALBERTA--(Marketwired - Aug 16, 2016) - American Creek Resources Ltd. (TSX VENTURE:AMK) ("American Creek") is pleased to report that its JV partner, [Tudor Gold Corp.](#) (TSX VENTURE:TUD) ("Tudor") has now completed the previously announced Magnetotelluric survey ("MT survey") and has commenced drilling on the Treaty Creek Property located immediately adjacent to Seabridge Gold's KSM project in the "Golden Triangle" of NW British Columbia 75km north of Stewart.

The MT survey was conducted by Simcoe Geoscience Ltd. using the same geophysicist that designed, ran, and interpreted MT surveys on the adjacent KSM and Brucejack projects owned by Seabridge Gold and Pretivm Resources respectively. The Treaty Creek program utilized the same equipment and technology that has been used with great success on the adjoining properties. The survey is 3D and covers all the areas of known mineralization on the Treaty Creek property and will aid in revealing the extent of the existing MT anomalies in far greater detail, and potentially reveal new anomalies, giving Tudor the same type of insights that have contributed to the major discoveries on the Seabridge and Pretivm properties within the same hydrothermal system.

American Creek and Tudor recently entered into a joint venture agreement with Tudor holding a 60% interest and American Creek and [Teuton Resources Corp.](#) each holding 20% carried interests in the project. Tudor is the operator.

An updated link with more information regarding the MT survey and the Treaty Creek property can be found on the American Creek website homepage.

[American Creek Resources Ltd.](#) is a Canadian junior mineral exploration company focused on the acquisition, exploration and development of mineral deposits within the Province of British Columbia, Canada.

Information relating to the Corporation is available on its website at [www.americancreek.com](http://www.americancreek.com)
