

GRAND JUNCTION, CO--(Marketwired - Nov 29, 2016) - [Bullfrog Gold Corp.](#) (OTCQB: BFGC) ("Bullfrog" or the "Company") is pleased to announce it has posted a letter to shareholders on its website [www.bullfroggold.com](http://www.bullfroggold.com), and that its CEO participated with David Morgan of The Morgan Report ([www.themorganreport.com](http://www.themorganreport.com)) in an interview with Stock Radio.

The shareholder letter emphasizes that the Company and its flagship Bullfrog Gold Project are substantially stronger and more valuable than they were a year ago, yet BFGC still remains undervalued compared to nearly all peer companies.

The audio interview provides the responses of David Morgan, a renowned economist, report writer and author, and David Beling, a seasoned mine and company builder. The topics of discussion are listed below:

Will Trumps cut and spend polices bring economic recovery to the US?

With 1 trillion dollars of infrastructure stimulation over the next ten years, is this encouraging for industrial commodities and do you see this reflected in the market, or is this a good time to take or build a position?

Bond sell-off and tax cuts will result in higher growth -- but also higher inflation and higher amounts of U.S. government debt. Could this be the final straw that drives investments out of equities and debt and find safety in metals?

The interview may be heard at the following link:

About Bullfrog Gold Corp.

Bullfrog Gold is focused on the further exploration and continued development of its flagship Bullfrog Gold Project located 120 miles NW of Las Vegas, Nevada. The Company controls 2,200 acres where Barrick Bullfrog Inc. produced 2.3 million ounces of gold during the period 1989 into 1999, of which nearly 1.5 million ounces were recovered from lands controlled by the Company. The Company has access to Barrick's large data base comprised of 157 miles of drilling in 1,298 holes, which today would cost more than \$40 million to re-create. Based on this data the Company has estimated that 470,000 ounces of gold mineralization averaging 0.89 g/tonne remains around Barrick's mines, in addition to having strong exploration potential on its surrounding lands.

#### *Cautionary Note Regarding Forward Looking Statements*

This press release may contain certain "Forward-Looking Statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the United States Securities Exchange Act of 1934, as amended. All statements, other than statements of historical fact, included herein including those with respect to the objectives, plans and strategies of the Company and those preceded by or that include the words "believes," "expects," "given," "targets," "intends," "anticipates," "plans," "projects," "forecasts" or similar expressions, are forward-looking statements that involve various risks and uncertainties. We use certain terms in this valuation such as "mineralization" and "mineral inventory estimates" that are not defined in Canadian National Instrument 43-101; or recognized under the U.S. SEC Industry Guide 7. The Company is presently an exploration stage company. Exploration is highly speculative in nature, involves many risks, requires substantial expenditures and may not result in the discovery of sufficient mineral deposits that can be mined profitably. Furthermore, the Company currently has no resources or reserves on any of its properties. As a result, there can be no assurance that such forward-looking statements will prove to be accurate, and actual results and future events could differ materially from those anticipated in such statements. Additional information regarding important factors that could cause actual results to differ materially from the Company's expectations is disclosed in the Company's documents filed from time to time with the United States Securities & Exchange Commission.
