

VANCOUVER, BRITISH COLUMBIA--(Marketwired - Dec 9, 2016) - [Pacific Ridge Exploration Ltd.](#) (TSX VENTURE:PEX) ("Pacific Ridge" or the "Company") reports that it has received the drill permit and drilling has now commenced on its road accessible TL Zinc Project located 80 km northeast of Vernon, British Columbia. The program will include up to 1,800 m of NQ core drilling in up to six drill holes. The target at TL is a large Broken Hill type or SEDEX (Sedimentary Exhalative) Zn-Pb-Ag massive sulfide deposit. The holes will test the main HELITEM electromagnetic conductor on the property, a flat conductive layer over 4 km long and 100 to over 200 m wide, with coincident anomalous gravity values.

Gerry Carlson, President of Pacific Ridge stated: "The target at TL is compelling: The large and strong EM conductor and coincident gravity with adjacent zinc showings in float and bedrock ranging from 1% to 19% Zn occur at a regionally favourable stratigraphic horizon with numerous known base and precious metal occurrences. I am pleased and excited that our drill program is finally underway."

The drill program is being carried out by Dorado Drilling Ltd. of Vernon, BC. Results will be announced when assays are received.

#### About the TL Property

TL is a 6,420 hectare zinc-lead-silver project located in south central British Columbia. The airborne magnetic-electromagnetic HELITEM survey defined a strong conductive layer, 4 km in length and approximately 100 to over 200 m wide that appears to be conformable within the flat-lying stratigraphy and could reflect massive sulphide mineralization. Mineralized float and outcrop samples comprise massive to semi-massive sulphide, containing sphalerite, pyrite and pyrrhotite. Of 56 grab samples collected, 40 assayed +1% Zn with a range of 1.08% to 18.87% and an average of 4.96% Zn.

A small amount of trenching and drilling was completed in 2012. Trenching, outside the main target area, encountered a zone of 7.16% Zn over 4 m. Drilling below the trenches (6 shallow holes, 490 m total) encountered a 10 to 13 m thick sulphide mineralized zone with zinc values ranging from less than 1% to 5%. Mineralization in trenches and drilling is believed to be a peripheral mineralized horizon stratigraphically above or distal to the main exploration target. The property is ideally situated with nearby highways, electrical power grid and rail.

#### About Pacific Ridge

Pacific Ridge is a mineral exploration company with a successful history of over 30 years.

The Company's *TL Zinc* project is a 6,420 hectare, road accessible zinc-lead-silver property located 80 km northeast of Vernon, British Columbia, ideally situated with nearby highways, electrical power grid and rail. The target at TL is a large Broken Hill type or SEDEX (Sedimentary Exhalative) Zn-Pb-Ag massive sulfide deposit. A drill program is currently underway.

The Company's *Poker Brown* gold-silver project is located 190 km from Reno, Nevada. The target is a large, bulk tonnage, heap leachable gold deposit. Numerous gold mines and advanced projects are located within an 80 km radius of the property, including Hycroft, Rosebud, Florida Canyon (12 km east of Poker Brown, recently acquired by [Rye Patch Gold Corp.](#)), Standard, Rochester, Relief Canyon, Majuba Hill, Wilco and Trinidad.

The Company holds a well-located project portfolio in Yukon's White Gold District, including *Mariposa*, *Eureka Dome* and *Gold Cap*, in the same geological environment as Goldcorp's Coffee Gold Project (acquired from Kaminak Gold earlier in 2016) and Kinross Gold's White Gold deposit.

The Company's 100 percent owned *Fyre Lake* copper-gold-cobalt massive sulphide project in the Yukon's Finlayson Lake District has been defined by 115 holes totaling over 23,200 metres of diamond drilling. The Company is considering its options for further development of the Fyre Lake project.

On behalf of the Board of Directors,

Gerald G. Carlson, President & CEO
