

(TheNewswire)

Val-d'Or, Quebec / TheNewswire / August 29, 2017 - [Knick Exploration Inc.](#) (TSX-V: KNX) ("Knick Exploration" or "the Company") is pleased to announce that an induced polarization (IP) survey crew from Remy Belanger Geophysics has been mobilized to the Trecesson property Cossette gold system area to perform 7.1 kilometers of survey.

The area to be covered includes ground both north and south of the known gold system as well as the 360 meter gap yet to be drill tested between the north and south Cossette zones. A test line will be conducted in the vicinity of the drill intercepts of 94.4 g/t gold over 6.65 meters and 10.5 g/t gold over 1.20 meters on the south and north Cossette zones, respectively (drill results are down hole widths and were previously reported, June 15, 2017 and Aug. 23, 2011).

The purpose of the survey is to evaluate the effectiveness of IP in tracing the Cossette gold system along strike and locate possible similar parallel mineralized structures. Anomalous results of the survey represent priority drill targets.

The Trecesson property is located approximately 80 kilometers north of the city of Val D'Or and 10 kilometers northwest of the city of Amos, Quebec, Canada.
