## Radisson extends the Vintage Zone to 325 m along strike with an intercept of 9.7 g/t gold over 2.9 m at the O'Brien project

18.10.2017 | Marketwired

ROUYN-NORANDA, QUEBEC--(Marketwired - Oct 18, 2017) - Radisson Mining Resources Inc. (TSX VENTURE:RDS)(OTC:RMRDF) ("Radisson" or the "Company") is pleased to announce that hole OB-17-48 has success extended the Vintage zone by additional 125 m along strike at the O'Brien gold project. The project is located along the Break halfway between Rouyn-Noranda and Val-d'Or in Quebec, Canada. The Vintage zone is parallel to, and to the notice of current resources at the O'Brien project. The zone is located only 85 meters north of the Cadillac Break in a context similar to producing and historical mines in the Cadillac mining camp. The structure has been traced by drilling on over strike length from East to West, vertical height of up to 360 meters and remains open in all directions.

## Press release highlights:

- Hole OB-17-48 extended the Vintage Zone by over 125 meters along strike with intercept of 9.7 g/t Au over 2.9 meters below surface. Assays are pending for the final portion of Hole OB-17-48. (See figure 1)
- The Vintage Zone has been traced over a strike length of 325 meters and vertical height of up 360 meters.
- Additional drill results are expected from Hole OB-17-49 completed in vertical extension of Hole OB-17-42, which 13.7 g/t Au over 1.5 meters. (See October 3rd, 2017 Press release)

Mario Bouchard, President and CEO commented: "Current exploration results continue to increase the overall dimension Vintage Zone. The Zone as now been traced on over 325 meters and remains open in all directions. Due to its high grain and proximity to current resources, the Vintage Zone has the potential to be an important part of O'Brien's exploration and development plan. As we await final results from the drill program completed this summer on the Vintage Zone, we are planning a drill program in order to test lateral and at depth extension of this zone."

Table 1 Drilling results summary

Drill hole	From	То	Length	Grade (g/t)	Interpreted zone
	(m)	(m)	(m)	Au	
OB-17-46	86.0	88.5	2.5	4.4	Piche Volcanics
Including	0.88	88.5	0.5	15.9	Piche Volcanics *VG
OB-17-48	208.6	211.5	2.9	9.7	Cadillac wacke
OB-17-48	260.0	260.5	0.5	PENDING	Cadillac wacke *VG

<sup>\*</sup>VG; Denotes presence of visible gold

Note; Results are presented as down hole width; true width are estimated between 55 to 70% of down hole thickness.

Vintage zone exploration program

As the company is waiting for final results from the drill program completed on the Vintage Zone, review of current results to rical exploration programs from the Vintage Zone is progressing in order to define a second phase exploration programs.

The Vintage zone is a parallel zone of the O'Brien project located approximately 85 meters north of the Cadillac Break is Cadillac Group of meta-sediments comprising sequence of polymictic conglomerate, banded iron formation (BIF) and go In comparison, current resources of 36E and Kewagama zones are located in the Piche Group, south of the Cadillac Break Vintage zone saw small historical exploration programs, which were never followed upon. In 2017, the company established also be several high-priority exploration drill targets through historical data compilation in this area of the O'Brien gold project.

26.04.2025 Seite 1/3

drill holes that tested these targets were completed over a strike length of 325 meters. The new info added to the few a historical information helps to demonstrate the continuity and the favourable geometry of the Vintage zone. All intercep open in all direction.

2017 drill program completed at 20,000 meters, 10,500 meters in assays pending

Furthermore, the company announces that it has completed the drill program planned in 2017 to approximate total of 2 meters. The drill program was completed with two main objectives. An approximate total of 15,000 meters was complete resource expansion from surface to a depth of 500 meters. As a second objective, the approximate 5,000 meters exploration targets defined outside the main sector of current resources of gold project, including the Vintage Zone.

There are currently 20 drill holes in assays pending for a total an approximate total of 10,500 meters.

All drill cores in this campaign are NQ in size. Assays were completed on sawn half-cores, with the second half kept for reference. The samples were analyzed using standard fire assay procedures with Atomic Absorption (AA) finish at Swa Laboratories Ltd, in Swastika, Ontario. Samples yielding a grade higher than 5 g/t were analyzed a second time by fire gravimetric finish at the same laboratory. Samples containing visible gold were analyzed with metallic sieve procedure. reference materials and blank samples were inserted prior to shipment for quality assurance and quality control (QA/Q0).

Tony Brisson, P. Geo, independent consultant, acts as a Qualified Person as defined in National Instrument 43-101 and reviewed and approved the technical information in this press release.

About Radisson Mining Resources Inc.

Radisson is a Quebec-based mineral exploration company. The O'Brien project, cut by the regional Cadillac Break, is F flagship asset. The project hosts the former O'Brien Mine, considered to have been the Abitibi Greenstone Belt's higher gold producer during its production (1,197,147 metric tons at 15.25 g/t Au for 587,121 ounces of gold from 1926 to 195 InnovExplo, April 2015).
