## Maxtech Details Exploration License Submissions in Zambia

13.06.2018 | FSCwire

Vancouver, British Columbia (FSCwire) - <u>Maxtech Ventures Inc.</u> (CSE: MVT) (Frankfurt: M1N) (OTC: MTEHF) (&#8220;Maxtech&#8221; or the &#8220;Company&#8221;) and Maxtech Mining Zambia Limited (MMZL) provide deta of interest exploration licenses filed to the Minister of Mines and Mineral Development of Zambia.

- The first area of interest submitted is for the application of a new Large Scale Exploration License in the Mukamb within the Mkushi District of the Central Province. The claim is 63 sq kilometers. The presence of a broad appare extent of manganese mineralization in an area of recognized manganese potential is seen as a positive sign. The of widespread, consistently high (but variable) water table in a flat-lying landscape that creates conditions favorab protracted, in-situ chemical weathering, factors that are conducive for the creation of near-surface, supergene sty manganese mineralization. Additionally of interest is an extensive area of mapped ferricrete, that is worthy of inspection of the creation of the creation
- The second area of interest submitted is for an application of a new Large Scale Exploration License in the Kabar within the Masaiti & Mkushi Districts of the Copperbelt and Central Provinces. The claim is 73 sq kilometers. The mineralization appears to be hosted within a specific sedimentary unit, albeit with subsequent tectonic controls who localized. The strike length of these quartzose units is considerable often running for several km&#8217 resultantly, the potential for along-strike continuation of the mineralization must be viewed as the principal exploration.
  High vanadium potential and, possibly, precious metal mineralization in the form of gold mineralization provide additional incentives for further exploration.

The exploration licenses submitted cover in addition to manganese, the mining rights to iron, cobalt, vanadium, nickel, or lead, gold and chromium on the areas. Once approval is granted for the large scale exploration licenses, MMZL will concurred the services of Lusaka based geological/exploration consultants GeoQuest Limited to conduct exploration work to primarily concentrate on the search for and evaluation of commercially viable quantities and grades of manganese ore. Company will file for new mining licenses if initial results are favorable. The Total Estimated Budget Expenditure (Years between US\$1,000,000 to US\$3,000,000 depending upon results and how fast work can proceed.

GeoQuest's exploration activities will include initially: the production of an environmental project brief, pegging/ of license areas, geological mapping, rock chip and soil sampling over the new license areas. A planned program of dia and /or RC drilling as well as possibly pitting and trenching to fully evaluate prioritized manganese areas for continuity, purity (deleterious material) and thickness. They will also do the freighting and assaying of the samples.

Assuming that results are positive then the following program will also be considered: follow up diamond core and/or R bulk sampling, initial resource estimation, pit optimization, hydrogeological, environmental as well as preliminary financ and any other work required to reach 'decision to mine' as quickly possible.

GeoQuest Limited will be Maxtech Zambia Mining Limited's authorized agent to prepare all documentation subminister of Mines and Mineral Development of Zambia. The technical information prepared in Zambia will be reviewed be Persons Mr. Julian Green and / or Mr. Harris Lucas with respect to MMZL manganese projects as defined under Nation Instrument 43-101.

"MMZL exploration licenses submissions are just the start of our African activities. We are presently researching opportunities in Namibia, and Zimbabwe to add to our expansion plans this quarter, " stated Peter Wilson, CEO Ventures.

About Maxtech Ventures Inc.

Maxtech Ventures Inc. is a Canadian-based diversified industries corporation focused primarily on manganese mineral
