

# Results of the Final 11 Holes - 2017/18 Drilling Program - Samalayuca Copper Property Further Near Surface Mineralisation Located

17.01.2019 | [GlobeNewswire](#)

TORONTO, Jan. 17, 2019 - [VVC Exploration Corp.](#) (“VVC” or the “Company”) (TSX-V: VVC) announces the results for the last eleven (11) diamond drill holes (DDH) from the Company’s drilling program at its Samalayuca Copper Property (the “Property”) in northern Chihuahua State, Mexico. A total of 6,700 meters in 62 holes were drilled during the 2017/2018 drilling campaign.

The 11 DDH’s tested 3 mineralized zones: Juliana - 2 DDH, 120 m, Suerte – 2 DDH, 111 m, and Concha – 7 DDH, 318 m, with 10 intersecting near surface copper (“Cu”) mineralization with values greater than 0.1% Cu over variable widths, as detailed in the table below. Only DDH SC18\_53 had no copper values greater than 0.1%. The results extend the copper mineralization, to both the east and west of the Gloria, Gloria Extension, and Gloria Extension East zones (for drilling results on these zones, previously released, see News Releases of Oct. 11, Aug. 17, Aug. 2 and Feb. 8, 2018, including accompanying maps and sections - Oct. 11 and Aug. 17, 2018, all filed on SEDAR).

Hole Number	From (m)	To (m)	Length (m) * Cu (%)	Cu (%)
<b>Juliana Zone</b>				
SC18_052	27.7	29.2	1.5	0.494
SC18_053	no significant significant values			
<b>Suerte Zone</b>				
SC18_054	29.5	32.5	3	0.287
SC18_055	20	24	4	0.774
<b>Concha Zone</b>				
SC18_056	31	50.65	19.65	0.315
SC18_057	23	51	28	0.788
SC18_058	27.8	31	3.2	0.165
including	45	48	3	0.217
including	50	55	5	0.547
SC18_059	0	3.4	3.4	0.309
including	96	101	5	0.155
SC18_060	0	3	3	0.3
including	31.7	34	2.3	0.395
including	36	39	3	0.15
including	53.7	55.8	2.1	0.696
including	60	63.8	3.8	0.367
SC18_061	9.4	12.3	2.9	0.17
including	59	75	15	0.24
including	106.75	110.75	4	0.502
SC18_062	8	11	3	0.223
including	66.45	78	11.55	0.229
including	102	105	3	0.23

\* The true width is thought to be 50-70% of intersected width.

VVC’s President, Jim Culver, pointed to the results as further confirmation of the potential of the

Property and added: *&ldquo;The limited drilling in these 3 zones further highlights the significant potential of the Samalayuca Copper Property. More intensive exploration and drilling is required to better understand their potential. The 2017/18 drilling has confirmed significant, near surface, copper mineralization over an approximate 5-kilometre strike length.&rdquo;*

A summary of the complete drilling program will be disseminated in a news release in the near future.

#### Analysis and QA/QC

Core samples were sent to the ALS Chemex laboratory in Chihuahua city, MX for analysis by their ICP61 technique. Mineralization is mainly oxidized copper minerals such as malachite, azurite, chrysocolla, brochantite, and others with some disseminated copper sulphides, such as chalcopyrite, bornite, and chalcocite. ALS Chemex analytical services are accredited by SANAS and are carried out with a quality assurance protocol in line with ISO 17025:2005. Samples are stored at the Corporation&rsquo;s field camps, then put into sealed bags until delivered by company personnel to the laboratory where the samples are prepared and analyzed. Samples are logged in the tracking system, weighed, dried and finely crushed to better than 70% passing a 2 mm (Tyler 9 mesh, US Std. No.10) screen. A split of up to 1,000 g is taken and pulverized to better than 85% passing a 75-micron (Tyler 200 mesh) screen, and a 50-gram split is analyzed. Blanks, duplicates and certified reference material (standards) are inserted to monitor laboratory performance.

This news release has been reviewed for accuracy and compliance under National Instrument (NI) 43-101 by Peter M. Dimmell, BSc. P.Geo. (NL, ON), a VVC Director and Qualified Person as defined by NI 43&minus;101, Standards of Disclosure for Mineral Projects. He has approved the scientific and technical disclosure in the news release.

#### About VVC Exploration Corporation

VVC is a Canadian exploration and mining company focused on the exploration and development of copper and gold deposits in Northern Mexico, specifically the Samalayuca copper property in Chihuahua State. VVC has other projects in Mexico and Canada, including gold and silver prospects, Cumeral and La Tuna, in Sonora and Sinaloa States, Mexico and a grassroots gold/VMS prospect in the Timmins area of northern Ontario.
