## Lydian Announces Prime Minister of Armenia's Statement that Open Access to the Amulsar Project Should be Restored

09.09.2019 | GlobeNewswire

Prime Minister Pashinyan Stated There is No Legal Basis to Prevent Lydian From Advancing the Amulsar Project in Accordance with its Existing Environmental Impact Assessment

Mining and Environmental Inspection Body to Conduct Inspection to Ensure Compliance with Permits and EIA

Lydian Agrees to Establish Participatory Environmental Monitoring Arrangement with Armenia and Community Representatives

TORONTO, Sept. 09, 2019 -- <u>Lydian International Ltd.</u> (TSX: LYD) (&ldquo;Lydian&rdquo; or the &ldquo;Company&rdquo;) announced today that during a live Facebook broadcast, Prime Minister Nikol Pashinyan, of the Republic of Armenia stated that access to the Amulsar Project site should be restored and the protesters blocking access should open the roads.

The Prime Minister also stated that there is no legal basis on which the Government of Armenia can prevent Lydian from advancing the Amulsar Project in accordance with permits based on an existing Environmental Impact Assessment (&Idquo;EIA") or require an additional EIA regarding the Amulsar Project at this time. The Prime Minister noted that Lydian had affirmed expressly that it would comply with its EIA performance standards and then stated that stopping the Amulsar Project on environmental grounds would clearly illustrate a discriminatory approach regarding Lydian and not enhance Armenia's ability to attract foreign investment.

The Prime Minister further stated that the Government's Mining and Environmental Inspection Body will conduct an inspection to ensure that Lydian is complying with its permits, including that no changes have been made to the Project unless permitted under the EIA. The duration of the inspection could be as short as 30 days or longer depending on what is discovered.

Edward Sellers, Interim President & CEO of Lydian said today: &Idquo; Thousands of Lydian supporters welcome additional recognition from the Government of Armenia that there are no grounds to prevent Lydian from completing and operating the Amulsar Project. Lydian is looking forward to recovering and rebuilding its ability to complete construction and operate the Amulsar Project in accordance with its environmental performance standards. We are also looking forward to establishing a fair and transparent participatory environmental monitoring arrangement so Lydian and all its stakeholders can have confidence in the results and take pride in our operations."

"Lydian has agreed to share concurrent access to Lydian's environmental monitoring apparatus and results going forward under arrangements to be finalized with the Government involving officials and community representatives. The Government has said it also intends to establish its own monitoring capabilities relating the Amulsar Project and to build out its environmental monitoring capabilities nationally."

Mr. Sellers continued: &Idquo;During recent discussions with the Government of Armenia, Lydian confirmed that it will not be able to restart material construction on site until next April or May, although there will be some rehabilitation and earth moving associated with site recovery and remediation in the interim. We also confirmed that production is not intended to commence until Q4 2020 or Q1 2021, depending on how construction advances."

&Idquo;Lydian has been fully transparent in its environmental and operating practices. Those practices meet or exceed applicable international standards of environmental stewardship and sustainability. Lydian's lenders and major shareholders have required an independent audit of Lydian's performance to those standards and was found by Knight Piesold & Co. to be substantially compliant. Lydian's environmental standards and practices were also fully disclosed and confirmed as part of the comprehensive EIA under which Lydian received its mining permits."

## About Lydian International Limited

Lydian is a gold developer focused on construction at its 100%-owned Amulsar Project, located in south-central Armenia. However, illegal blockades have prevented access to Amulsar since late June 2018. Amulsar is expected to be a large-scale, low-cost operation with production targeted to average approximately 225,000 ounces annually over an initial 10-year mine life. Estimated mineral resources contain 3.5 million measured and indicated gold ounces and 1.3 million inferred gold ounces as outlined in the Q1 2017 Technical Report. Existing mineral resources beyond current reserves and open extensions provide opportunities to improve average annual production and extend the mine life. Lydian is committed to good international industry practices in all aspects of its operations including production, sustainability, and corporate social responsibility.
