

Premier Reports Positive Development Progress at Lupita Extension

05.02.2020 | [CNW](#)

Vein averages 3.9 m of 4.90 g/t Au along 93 m of development

THUNDER BAY, Feb. 5, 2020 - [Premier Gold Mines Ltd.](#) (TSX:PG) (OTCPK: PIRGF) ("Premier", "the Company") is pleased to announce that the Company is progressing, ahead of schedule, development of the Lupita Extension underground development at the Company's 100%-owned Mercedes Mine, located in the State of Sonora, Mexico. The program has been designed to follow-up on the positive exploration and delineation results reported in 2019. Highlights from this development up to January 31, 2020 include:

- Development extends 177 m west of the 2018 Lupita mineral resource and is expected to continue for a further 100 m
- Includes 93 m of development along the mineralized vein with average width of 3.9 m of 4.90 g/t Au
- Dilution from the last 93 m of development is estimated at 23%

"Our underground development program is confirming Lupita Extension as an important contributor to the future of Mercedes," commented Stephen McGibbon, Executive Vice-President. "We are now working to determine how best to bring this newest discovery to production."

Lupita Extension

The Lupita vein consists of silicified vein of typical low-sulphidation epithermal textures and diagnostic green quartz that presents a 3 m width on outcrop. The Lupita Extension is the continuation to the west of Lupita mineralization, which was part of the LOM 2019. During 2019, a successful delineation program of 87 drill holes extended the known Lupita mineralization along a strike length of 300 m. A clear difference between the two Lupita areas are the noticeable higher grade and width in Lupita Extension versus Lupita as well as the steeper dipping geometry of about 50 degrees. The delineation drilling program returned an average true width of 2.9 m of 5.56 g/t Au length-weighted average grade.

The Lupita Extension drilling in 2019 was focused on upgrading mineralization to year-end resources, with a portion expected to be included in reserves. This new horizon has been added to the LOM 2020 and underground development began in late 2019. So far, 177 m has been developed along the vein, presenting widths from 0.8 m to 5.2 m and averaging 3.0 m of true width. The last 93 m of the development returned an average grade of 4.90 g/t Au for an average true width of 3.9 m, with an estimated dilution of 23%. This grade is some 39% higher than the YE2018 Measured and Indicated mineral resources for Lupita at 3.52 g/t Au.

Besides development at Lupita Extension, important MRRM replacement plans for 2020 includes drilling and development at Marianas and continued mineral resource delineation at San Martin.

[Premier Gold Mines Ltd.](#) is a gold-producer and respected exploration and development company with a high-quality pipeline of precious metal projects in proven, accessible and safe mining jurisdictions in Canada, the United States, and Mexico. Premier remains focused on creating a low-cost, mid-tier gold producer through its two producing gold mines; South Arturo and Mercedes, and through future mine development opportunities at Hardrock in Ontario (Greenstone Gold JV) where permitting and development initiatives are ongoing and McCoy-Cove in Nevada.
