Metals Creek Samples 11.8 g/t Gold at Careless Cove, Central Newfoundland

30.07.2020 | Newsfile

Toronto, July 30, 2020 - Metals Creek Resources Corp. (TSXV: MEK) (the "Corporation") is pleased to report results from recent prospecting activities on its Careless Cove property in Central Newfoundland. The results include 11.8 grams per tonne (g/t) gold (Au) in grab samples. The Careless Cove claim block is one of two 100% owned claim blocks comprising the Careless Cove/Yellow Fox Property. The claims are located approximately 12 kilometers southwest of New Found Gold Corp. as illustrated on the attached map. ("New Found Gold") announced excellent results from recent drilling on their Queensway Gold Project. Drill Hole NFGC-19-01 results included an intersection of 92.86 g/t Au over 19.0 meters (see Mexican Gold Corp., Press Release dated January 26, 2020). Gold values on adjacent properties in similar rocks are not representative of the mineralization on the property, have not been verified, and should not be relied upon.

Careless Cove Claims

The recent prospecting carried out at Careless Cove uncovered mineralization comprised of quartz breccia with disseminated and vein hosted pyrite/arsenopyrite with minor stibinite.

Three samples taken from outcrop, assays are as follows:

Sample Number g/t Au

2361027.39

2361030.47

2361044.15

In addition, follow up prospecting has located rubble approximately 50 meters away from the above mentioned outcrop samples with assays of :

Sample Number g/t Au

323763 7.37

323764 11.83

Yellow Fox Claims

No new sampling was carried out at Yellow Fox however a description of previous MEK sampling carried out in 2011 follows: (see Newfoundland Geoscience Resource Atlas Geofile Number: 002D/0779).

Initial prospecting carried by Metals Creek in 2011, resulted in a concentration of highly anomalous gold

25.04.2025 Seite 1/3

values with one sample returning an assay of 59.413 g/t Au (main Yellow Fox showing) (see MEK press release dated June 22, 2011). This led to an enhanced work program which included soil sampling and trenching. B-horizon soils were collected 25 meters apart over two, 100m spaced, east-west trending recce lines over the higher-grade gold sample in an attempt to trace the direction of mineralization. Follow-up trenching was completed across the mineralization. Initial sampling consisted of 13 selective grab samples taken throughout the trenches with assay values ranging from 214 ppb to 1877 ppb Gold and up to 11.1 % Sb, 5.5% Pb, 7 % Zn, and 72.9 g/t Ag. The trenches were then channel sampled along their length using a diamond bladed rock saw. The best result from the channels were from Trench #1 which assayed 0.306 g/t Au over 26.82m within 29 continuous samples and 4.57% Sb over 1 meter. These results were very encouraging and indicated the potential for a more widespread gold system on the Yellow Fox claim group.

Management will continue to monitor the COVID-19 situation and adjust plans as the situation evolves. Metals Creek thanks our partners and all stakeholders for their understanding and support, and looks forward to commencing field operations with extra measures in place to protect our employees, contractors and communities from transmission of Covid-19 such as Personal Protective Equipment and Physical Distancing.

Wayne Reid, P.Geo, a Director for the Company and a qualified person as defined in National Instrument 43-101, is responsible for this release, and supervised the preparation of the information forming the basis for this release.

Analyses in this release were performed by Eastern Analytical of Springdale, NL with ISO 17025 accreditation. Samples were transported in sealed bags to Eastern and all samples were assayed using industry-standard assay techniques for gold. Gold was analyzed by a standard 30 gram fire assay with an AA finish

Note: The surface grab samples described in this news release are selective by nature and are unlikely to represent average grades of the property.

About Metals Creek Resources Corp.

Metals Creek Resources Corp. is a junior exploration company incorporated under the laws of the Province of Ontario, is a reporting issuer in Alberta, British Columbia and Ontario, and has its common shares listed for trading on the Exchange under the symbol "MEK". Metals Creek has signed an agreement with Newmont Corporation, where Metals Creek can earn a 100% interest in the past producing Dona Lake Gold Project in the Pickle Lake Mining District of Ontario. Metals Creek has also earned a 50% interest in the Ogden Gold Property from Newmont Corporation, including the former Naybob Gold mine, located 6 km south of Timmins, Ontario and has an 8 km strike length of the prolific Porcupine-Destor Fault (P-DF). In addition, Metals Creek also has multiple quality projects available for option in Ontario and Newfoundland which can be viewed on the Company's website. Parties interested in seeking more information about properties available for option can contact the Company at the number below.

Additional information concerning the Company is contained in documents filed by the Company with securities regulators, available under its profile at www.sedar.com.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
