

# Spruce Ridge Begins Access Trail to South Pond "B" Gold Zone

16.07.2021 | [ACCESS Newswire](#)

PUSLINCH, July 16, 2021 - [Spruce Ridge Resources Ltd.](#) (TSX-V:SHL) (the "Company") is pleased to announce that work has begun on the access trail from Great Burnt Main Zone to South Pond "B" Gold Zone and continues on to the South Pond "A" Copper/Gold Zone. Once the trail reaches the South Pond "B" Gold Zone drill sites will be cleared and drilling will commence.

Results of historical drilling on the South Pond "B" Zone by BP Minerals in 1987 and 1989 included the following: 27.25 metres averaging 1.06 grams of gold per tonne (g/t Au) in hole GB87-08, 4.33 metres of 4.43 g/t Au in GB87-12 and 17.13 metres of 1.11 g/t Au in GB89-06. The map below shows the locations and gold intersections in the BP drill holes.

CEO John Ryan stated "Spruce Ridge's decision to carry out additional diamond drilling on the South Pond "B" Gold Zone is a timely one. Recent discoveries by New Found Gold Corp., Sokoman Minerals Corp. and others, have highlighted the potential of the Paleozoic sedimentary and intrusive rocks of Central Newfoundland to host substantial zones of high-grade gold. Questions remain about the results of the BP Minerals drill programs in the 1980s, which used ICP analysis for gold, instead of the more popular, and more reliable fire assay procedure. We did some re-analysis of BP's archived core in 2016, which showed that the ICP method appeared to have understated the gold content of samples previously analyzed by BP. A single row of historical drill holes with gold values over a length of over a kilometre is a good starting point to work towards defining a gold deposit."
