

Benchmark Update on Feasibility Level Engineering Work

16.09.2021 | [Newsfile](#)

Edmonton, September 16, 2021 - [Benchmark Metals Inc.](#) (TSXV: BNCH) (OTCQX: BNCHF) (WKN: A2JM2X) (the "Company" or "Benchmark") is pleased to provide an update for ongoing engineering and technical work to support a feasibility level design for the Lawyers Gold-Silver Project. The flagship project is located within a road accessible region of the prolific Golden Horseshoe area of north-central British Columbia, Canada.

Benchmark is currently drilling seven (7) PQ and HQ sized multipurpose holes in the Cliffs Creek Deposit and the AGB Deposit, totaling 2,415 metres for hydrogeological, geotechnical, resource, and metallurgical test-work. Work includes in-situ permeability (packer) test work, geotechnical logging, down-hole televiewer mapping, sampling for geotechnical test work such as unconfined compressive strength, sampling for comminution test work, piezometer installation for groundwater baseline towards engineering design and environmental baseline, and resource definition. The work is being led by a world-class team from Benchmark, APEX Geoscience Ltd, JDS Mining Inc., Knight Piesold Ltd (KP), F. Wright Consulting Inc, and DGI Geoscience Inc. This work is in parallel to additional feasibility level testing for detailed metallurgical modeling such as gravity recovery by FLSmidth (Knelson), bottle-roll leach recovery, bond index, liquid-solid separation, petrography, and detox by SGS (Lakewood) and Bureau Veritas (BV). All work is supporting the preliminary mine schedule and plant and infrastructure design based on the Mineral Resource Estimate (MRE) with an effective date at May 11, 2021.

Ian Harris, Vice President Engineering commented, "The Company is focused on completing all necessary engineering work to establish Canada's next gold-silver mine. Because there has been such a heavy focus on fast tracking to a construction decision and defined exploration windows the company has been steadfast in maintaining a detailed overall project schedule. Not only has this allowed us to maintain a fast-track pace but added to the cost effectiveness by executing multipurpose drilling and data collection. While logistically difficult in one of the busiest seasons ever in the Golden Horseshoe, the team has executed above expectations. The project continues to be on track for potential construction readiness in 2024."
