

# Mineral Mountain Resources Limited: Announces Update On Private Placement

04.02.2022 | [CNW](#)

VANCOUVER, Feb. 4, 2022 - [Mineral Mountain Resources Ltd.](#) ("Mineral Mountain" or the "Company") (TSXV: MMV) (OTCQB: MNRLF) (FRANKFURT: M8M) announces further to its news release of November 22, 2021 and January 6, 2022 regarding plans to complete a private placement, that the TSX Venture Exchange has granted the Company an additional 30-day extension to close the private placement with the new expiry date for the closing being March 4, 2022.

The Company's news release dated November 22, 2021 and January 6, 2022 contemplated a private placement of up to 35,000,000 units (the "Units") at a price of CDN\$0.18 per unit for gross proceeds of up to CDN\$6,300,000. Each Unit consists of one common share and one common share purchase warrant ("Warrant"). Each Warrant can be exercised for one year at CDN\$0.35 per share.

The private placement is subject to approval of the TSX Venture Exchange and the securities will be subject to a four month hold period under Canadian securities laws. Net proceeds from the private placement will be used to complete a fully permitted 9,000m drill program to test the down plunge extension of 200m wide by 1800m long Standby Mine gold zone, for drill permitting applications to test the newly acquired King of the West Trend (NR, June 28, 2021) and for general working capital.

## About the Standby Mine Gold Target

All geologic, geophysical and drill results to date suggest a Homestake ledge-type target exists at Standby and is potentially of large scale. Mineral Mountain's goal is to extend the Standby Mine gold mineralization down-plunge through systematic step-out drilling along strike and down-plunge in the Upper Tail to discover an Ore Centroid at depth.

Approximately 50,000-60,000 tons of ore were mined historically from the Standby Mine before 1950, mostly from oxidized ores in four large open cuts connected by underground workings to a maximum depth of 130 meters. Historic outcrop surface sampling from the walls and rim of the open cuts averaged 9.1 m @ 10 g/t Au with grab samples up to 38 g/t Au. A shaft was sunk to the 130 m (425- ft) level and underground channel sampling assayed 10.1 m @ 6.0 g/t Au. Historical drilling at the Standby Mine consists of 16,360 m (53,677 ft) across 45 core holes, all in the Upper Tail. MMV's two previous core drilling campaigns between 2018 and 2020 extended known gold mineralization from the bottom of the historic Standby Mine workings from 130 meters below surface to a total plunge length of 850 meters.

Mineral Mountain's proposed drilling program in the Rochford District will focus on the Standby Mine Target and is fully permitted for drilling, subject to this proposed financing and COVID-19 restrictions. The 9,000-meter drilling program as currently constituted will be focused on three target areas in general: 1) Several additional holes around MMV hole ST18-006, which cut 43.5 m @ 1.21 g/t Au including several higher-grade internal zones such as 2.5 m @ 4.39 g/t Au and 1.50 m @ 5.24 g/t Au. This hole was near historic drill hole BLG-UG-03 that cut, including. These intercepts were 100-150 m below surface and represent the opportunity to outline a near-surface high-grade ore shoot in the Upper Tail environment.

A series of proposed holes to intersect the same depth interval cut by historic Homestake Mining Co. drilling in the SM-86 and SM-87 holes thought to be the upper parts of the Standby Ore Centroid. These historic holes represent a significant step-off along strike and down-plunge from the Standby Mine and the deepest historic exploration work performed at the Standby Target Trend (1,000 and 1,800 m down-plunge from surface respectively). These results were highly encouraging, including 3.05 m @ 10.23 g/t Au. These two holes potentially intersected the crucial Upper Tail-Ore Centroid transition and need to be replicated by MMV and further tested with systematic step-out drilling to confirm internally consistent high grade gold is present.

Jeff Hrcir, the Company's chief geologist commented "Confirming the existence of an Ore Centroid at

Standby would be a game-changing discovery for Mineral Mountain Resources and set the stage for future resource delineation drilling"

On Behalf of the Board of Directors
