

Golden Ridge Resources Outlines Multiple Large Gold in Soil Anomalies on the Williams Gold Property

10.03.2022 | [The Newswire](#)

Surrounded by New Found Gold Corp's Queensway South Gold Project

Kelowna, March 10, 2021 - [Golden Ridge Resources Ltd.](#) ("Golden Ridge" or "the Company") (TSXV:GLDN) is pleased to report that the Company's 2021 infill soil sampling program has discovered three large gold-in-soil anomalies on the Williams Gold Property ("Williams" or "The Property"), that is surrounded by New Found Gold Corp (NFGC)'s Queensway South Gold Property in the Central Newfoundland Gold Belt of the province of Newfoundland and Labrador (Figure 1).¹ The 800m, 425m and 350m long anomalies, which remain open along strike, include values of 1.5 g/t and 1.05 g/t Au which are some of the highest gold-in-soil assays reported from the Central Newfoundland Gold Belt to date (Figure 2). Trenching has also highlighted strong hydrothermal veining, elevated pathfinder elements (arsenic and antimony) and gold mineralization along the above noted gold-in-soil trends.

Numerous Gold In Soil Anomalies Along Appleton Fault Corridor

Some 1,316 soil samples were collected in the 2021 field program, of which 886 soil samples have been received to date. Soil sampling was primarily done on a 25x25m high-density grid, focusing on the portion of the Property overlying the Appleton Fault Corridor, and 38 of the 886 received samples returned assays greater than 50 ppb Au, which is considered highly anomalous for the region. The gold-in-soil anomalies remain open along strike and include anomalies with strike-lengths of at least 800m, 425m, and 350m (Figure 3, Figure 4). The anomalies strike ENE and NE similar to high grade gold mineralized trend in the Northern portion of the Queensway property. Sampling of B-horizon soil has proven to be an effective geochemical exploration tool and Golden Ridge will continue to extend the soil sampling, and delineate the anomalies more precisely, as soon as weather permits.

Trenching Highlights Numerous Mineralized Zones Within Appleton Fault Corridor

Trenching was conducted throughout the Williams Property and revealed numerous zones of hydrothermal veining, alteration, and mineralization within the Dog Bay Line and Appleton Fault Corridors. The 2021 trenching program was the first ever on the Williams Gold Property and was conducted to follow up on the 2020 100x100m regional soil-sampling program.

The maiden trench-sampling program at Williams consisted of 356 continuous chip and channel samples (305 received) along a combined total of 323m in 22 trenches and was widely dispersed across the property. Previous to 2021 only limited float prospecting had been conducted on the Property. The primary focus of the 2021 trenching program was to test bedrock proximal to the locations of historic high-grade float samples, follow up on the 2020 100x100m regional soil sampling program, determine the effectiveness of soil sampling at Williams and investigate the nature of mineralized zones.

Channel sampling within the Appleton Fault Corridor highlighted a 0.5m interval of 1.92 g/t Au, and a 3m interval of 0.40 g/t Au, within the bounds of the northern 800m soil anomaly, and 2m of 0.57 g/t Au within the southern 425m soil anomaly. Trenching within the soil anomalies confirms gold mineralization in bedrock. Pyrite, arsenopyrite, chalcopyrite, and stibnite are coincident with the gold mineralization suggesting the potential for additional mineralization associated with high tenor gold and pathfinder elements contained in the soil anomalies.

Mike Blady, Director, CEO & President of Golden Ridge stated "High-density soil sampling has proven an effective tool for exploration in the Williams Gold Property with multiple large gold anomalies being delineated. The gold anomalies identified within the Appleton Fault Corridor remain open along strike, and

trenching has proven the relationship between gold in soil and in bedrock. In 2021 we have successfully delineated numerous exploration targets within the underexplored Williams Gold Property, with large portions of the Property remaining to be tested. Golden Ridge is excited for the 2022 season, when we will continue to follow up soil anomalies with more soil sampling, as well as preparing for the maiden diamond-drilling program."

2022 Exploration Plans

A detailed 2022 exploration plan will be released by the Company in the coming weeks once final 2021 assays are received. Exploration will focus on diamond-drill testing of the gold anomalies delineated by the high-density soil sampling, and corresponding bedrock targets identified by trenching. Initial drilling will consist of a 5,000m program that will be expanded as required. In addition to drilling, the Company will continue to conduct geochemical surveys, further trenching where indicated, and potentially some additional airborne geophysical surveys, to further define and add to the targets.

Due to increased exploration activity in Newfoundland, and the consequent demand for analytical services, the Company experienced significant delays on reporting results in 2021. For 2022 the Company will be implementing a strategy to cut down on these delays and keep exploration and news flow in line with industry norms.

Qualified Person:

Dr. Stephen Amor, PhD, PGeo, technical advisor to the Company, is the Qualified Person as defined by National Instrument 43-101 who has reviewed and approved the technical data in this news release.

Acknowledgments:

Golden Ridge Resources acknowledges the financial support of the Junior Exploration Assistance Program, Department of Industry, Energy, and Technology, Government of Newfoundland and Labrador.

About Golden Ridge Resources:

Golden Ridge is a TSX-V listed exploration company engaged in acquiring and advancing mineral properties located in Newfoundland and British Columbia. Golden Ridge is currently focused on exploration and development of its portfolio of exploration assets in Newfoundland. The Company owns a 100% interest in the 1,700-hectare Hank copper-gold-silver-lead-zinc property and the 3,000-hectare Hickman copper-gold property located in the Golden Triangle district, approximately 140 kilometres north of Stewart, British Columbia and has a portfolio of exploration projects in Newfoundland.

Cautionary Note Regarding Forward-Looking Statements

Certain statements contained in this news release, constitute "forward-looking information" as such term is used in applicable Canadian securities laws. Forward-looking information is based on plans, expectations and estimates of management at the date the information is provided and is subject to certain factors and assumptions, including: that the Company's financial condition and development plans do not change as a result of unforeseen events, that the Company obtains required regulatory approvals, that the Company continues to maintain a good relationship with the local project communities. Forward-looking information is subject to a variety of risks and uncertainties and other factors that could cause plans, estimates and actual results to vary materially from those projected in such forward-looking information. Factors that could cause the forward-looking information in this news release to change or to be inaccurate include, but are not limited to, the risk that any of the assumptions referred to prove not to be valid or reliable, which could result in delays, or cessation in planned work, that the Company's financial condition and development plans change, delays in regulatory approval, risks associated with the interpretation of data, the geology, grade and continuity of mineral deposits, the possibility that results will not be consistent with the Company's expectations, as well as the other risks and uncertainties applicable to mineral exploration and development activities and to the Company as set forth in the Company's Management's Discussion and Analysis reports filed under the Company's profile at www.sedar.com. There can be no assurance that any forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, the reader should not place any undue reliance on forward-looking information or statements. The Company undertakes no obligation to update forward-looking information or statements, other than as required by applicable law.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
