- \$42.2 million cash balance on September 30, 2022

Overview of Q3 2022 Results

Fortitude Gold sold 9,419 gold ounces at a total cash cost of \$613 per ounce (after by-product credits). Realized metal prices during the quarter averaged \$1,719 per ounce gold*. The Company recorded net income of \$1.7 million, or \$0.07 per share. Cash and cash equivalents at quarter end totaled \$42.2 million. The Company produced 9,500 ounces of gold during the quarter and maintains its 2022 gold production Outlook of 40,000 gold ounces (a range of 36,000 to 40,000 ounces).

Mr. Jason Reid, CEO and President of Fortitude Gold, stated "Production results for the quarter are in line with our 2022 production Outlook range. Financial results included net income of \$1.7 million, all-in sustaining cost of \$687 per gold ounce, \$2.9 million in dividends to shareholders, \$3.7 million deployed to exploration all while increasing our cash balance to \$42.2 million. I believe we continue to execute our strategic business strategy, which has resulted in Fortitude outperforming our industry peers on year-to-date valuations during this strong market pullback in the mining equities."

Mr. Reid continued, "Exploration drilling included continued exciting drill results from Golden Mile and exciting first drill results from County Line. A significant number of surface samples from our Ripper property generated drill targets for a possible 2023 drill program. Our exploration team continues to be exceptionally busy during the fourth quarter with drill programs planned along the Isabella Pearl trend, Golden Mile, County Line and East Camp Douglas properties. We are pleased to remain a profitable gold producer in the Walker Lane Mineral Belt, with a stellar portfolio of 100% owned properties, and believe we are moving closer to building our second mine in Nevada, U.S.A, arguably the world's premier mining jurisdiction."

1. The difference between what we report as "metal production" and "metal sold" is attributable to the difference between the quantities of metals contained in the doré we produce versus the portion of those metals actually paid for according to the terms of our sales contracts. Differences can also arise from inventory changes incidental to shipping schedules, or variances in ore grades and recoveries which impact the amount of metals contained in doré produced and sold.
