

Sokoman Minerals Corp. Provides Update - Moosehead Gold Project

26.07.2023 | [ACCESS Newswire](#)

Alpha IP Survey Identifies Multiple Anomalies

ST. JOHN'S, July 26, 2023 - [Sokoman Minerals Corp.](#) (TSXV:SIC) (OTCQB:SICNF) ("Sokoman" or the "Company") is pleased to provide an update on the Alpha IP Resistivity / Chargeability Survey completed at Moosehead earlier this year which has outlined first, second and third-priority anomalies to both the west and east of the main mineralized trends drilled in the central portion of the property. The anomalies will be evaluated with the data merged with earlier geophysical surveys and diamond drill holes to further refine drill targets. The Alpha IP Survey consisted of six Induced Polarization (IP) profiles on the grid laid out based on exploration objectives, geological target size, and terrain conditions with line lengths from 1450 m to 1525 m at 100 m intervals.

The Alpha IP has the potential to see deeper than older IP systems with the results pointing to high-priority targets to the west of, and below, the Western Trend, and a series of second and third-priority targets to the east of the Eastern Trend which may be linked to the 253 Zone initially drilled in 2022. Three figures included in this update show the location of the anomalies in a) a plan view; b) a plan view with mineralized zones; and c) a longitudinal sectional view.

The highest-priority anomalies (green dots) in the center of the surveyed area (Figures 1 and 2), correlate well with the location of the Eastern Trend, 75 Zone, and South Pond Zone mineralization. Figure 3 shows the anomalies on a long section view of the mineralized trends indicating that most of the anomalies on the western and eastern portions have not been tested by drilling. Calculated anomaly depths range from less than 100 m vertical to about 400 m depth.

Tim Froude, President, and CEO of Sokoman, says: "We are quite excited by the potential we see in the anomalies generated by the Alpha IP Survey. The similar character of the cluster of high-priority anomalies in the western part of the survey to those in the centre of the survey is quite intriguing and will obviously be addressed in the next round of drilling or trenching.

In addition to the contractor's recommendations, we have just completed our own internal interpretation of the data and have come up with several targets independent of those outlined by Simcoe Geoscience. In total, we have 19 drill and or trenching targets (depending on depth) to investigate with a recommendation for approximately 3,800 metres of diamond drilling. We intend to begin testing these anomalies in about two weeks once drillers have returned from their regular scheduled break."

About Sokoman Minerals Corp.

[Sokoman Minerals Corp.](#) is a discovery-oriented company with projects in the province of Newfoundland and

Labrador, Canada. The Company's primary focus is its portfolio of gold projects; the 100%-owned flagship, advanced-stage Moosehead, as well as Crippleback Lake; and East Alder (optioned to [Canterra Minerals Corp.](#)) along the Central Newfoundland Gold Belt, and the district-scale Fleur de Lys project near Baie Verte in northwestern Newfoundland, that is targeting Dalradian-type orogenic gold mineralization similar to the Curraghinalt and Cavanacaw deposits in Northern Ireland. The Company also entered into a strategic alliance with Benton Resources Inc. through three, large-scale, joint-venture properties including Grey River, Golden Hope, and Kepenkeck in Newfoundland. Sokoman now controls, independently and through the Benton alliance, over 150,000 hectares (>6,000 claims - 1500 sq. km), making it one of the largest landholders in Newfoundland, in Canada's newest and rapidly emerging gold districts. The Company also retains a 1% NSR interest in an early-stage antimony/gold project (Startrek) in Newfoundland, optioned to Thunder Gold Corp (formerly White Metal Resources Inc.), and in Labrador, the Company has a 100% interest in the Iron Horse (Fe) project which has Direct Shipping Ore (DSO) potential.

Mineralization hosted on adjacent and/or nearby properties is not necessarily indicative of mineralization hosted on the Company's property.

The Company would like to thank the Government of Newfoundland and Labrador for past financial support of the Moosehead Project through the Junior Exploration Assistance Program.
