

# Helium One Global Ltd Announces Jackson-29 Flow Test Results & Gas Analysis Update

22.04.2025 | [ACCESS Newswire](#)

LONDON, April 22, 2025 - Helium One Global (AIM:HE1), the primary helium explorer in Tanzania with a 50% working interest in the Galactica-Pegasus helium development project in Colorado, USA ("the Galactica Project"), provides an update following the Blue Star Helium (ASX:BNL) ("Blue Star") announcement issued today regarding the Galactica Project.

## Highlights

- Jackson-29 flowed naturally during drilling and at Total Depth ("TD")
- Flow rate since TD has increased to over 320 thousand cubic feet per day ("Mcf")
- Projected stabilised flow rates are 350 Mcfd to 450 Mcfd, constrained to optimise production, with a maximum potential rate of 550 Mcfd
- Early samples return helium concentration of up to 3.30% (air-corrected) and 48.66% CO<sub>2</sub> in line with expectations

## Details

The Jackson-29 well reached TD at 1,183 feet (361m) within the Upper Lyons Formation, encountering the Lyons Sandstone Formation at 1,122 feet (341m). As expected, water was not encountered during drilling of the Lyons Formation with wireline logs confirming the penetrated Lyons Sandstone Formation to be high-quality and gas saturated.

Flow testing since TD has revealed increasing natural flow rates, reaching approximately 320 Mcfd to-date. Strong pressure build-up post-testing indicates high permeability and good reservoir communication. Based on previous engineering studies, and observed flow rates, the projected stabilised flow rates constrained for production optimisation are expected to be between 350 Mcfd and 450 Mcfd, with a maximum of 550 Mcfd.

Initial laboratory analysis of gas samples from Jackson-29 showed a helium concentration up to 3.30% and 48.66% CO<sub>2</sub> (and 48.04% nitrogen) in line with expectations.

## Galactica/Pegasus Development

The Galactica project forms part of the broader Galactica/Pegasus development, discovered by Blue Star in 2022. This large-scale project offers multiple potential product streams. Blue Star is advancing the Galactica project in joint venture with [Helium One Global Ltd](#). Under the farm-in agreement, Helium One will fund the first US \$450,000 of this well.

The third-party owned Red Rocks helium project adjoins Blue Star's Galactica Project (see map below). Development of Red Rocks further supports the commercialisation of the Galactica Project.

#### Notes to Editors

Helium One Global, the AIM-listed Tanzanian explorer, holds prospecting licences across two distinct project areas, with the potential to become a strategic player in resolving a supply-constrained helium market.

The Rukwa and Eyasi projects are located within rift basins on the margin of the Tanzanian Craton in the north and southwest of the country. These assets lie near surface seeps with helium concentrations ranging up to 10.4% helium by volume. All Helium One's licences are held on a 100% equity basis.

The Company's flagship southern Rukwa Project is located within the southern Rukwa Rift Basin in south-west Tanzania. This project is considered to be entering an appraisal stage following the success of the 2023/24 exploration drilling campaign, which proved a helium discovery at Itumbula West-1 and, following an extended well test, successfully flowed 5.5% helium continually to surface in Q3 2024.

Following the success of the extended well test, the Company flowed significant quantities of helium to surface and filed a Mining Licence ("ML") application with the Tanzania Mining Commission in September 2024. The 480km<sup>2</sup> ML has now been offered to the Company and was officially accepted in March 2025.

The Company also owns a 50% working interest in the Galactica-Pegasus helium development project in Las Animas County, Colorado, USA. This project is operated by [Blue Star Helium Ltd.](#) (ASX: BNL).

Helium One is listed on the AIM market of the London Stock Exchange with the ticker of HE1 and on the OTCQB in the United States with the ticker HLOGF.
